Description of Team Skills

Our team has a huge Interest in this project for a series of reasons. Not only we would be happy to work on this but we also have experience on very similar projects which would allow us to have a kickstart. Pedro and Jonny have participated on two hackathons on the last year where they made multiplayer games with Node.js servers. On their last hackathon they created a multiscreen multiplayer game which implemented many concepts that would be applied here. In this hackathon they both got to one of the finalists teams in HackUPC one of the biggest hackathons in Europe.

Jonathan also currently have an app in the Google Play store which allows the visualization of the students timetable(NottsLife) so we do have experience on app development, as well as we have team members with access and experience to Mac platforms for the development of IOs apps

Our team also have experience on different areas of graphical design and artistic skill such as the usage of the Adobe Creative Suite with experience ranging from Illustrator and Photoshop for simple image creation to After Effects and Flash for the creation of animations.

Highly Desirable Skills

In relation to programming all of our team members have experience programming from the most traditional languages on the Computer Science course to some less orthodox languages such as R, D and CoffeeScript.

Date of Submission of EoI	17 October 2016
Date of Pitch	21 October 2016
Notification of award	28 October 2016
